AMENDMENTS TO THE CLAIMS

Docket No.: 085523-0181114

This listing of Claims will replace all prior versions, and listings of Claims in the Application.

- 1. (Currently amended) An agent comprising:
- a first oxidant comprising a water-soluble permanganate,
- a second oxidant whose oxidation potential exceeds that of a mixture containing 50 mol% manganese VII and 50 mol% manganese VI; and
 - a primary and/or secondary alkali carbonate,

wherein the agent is in a liquid form and is storage-stable
wherein the agent comprises:

a peroxedisulfate;

a permanganate;

a polyphosphate;

a metaphosphate, and

a carbonate.

- 2. (Previously Presented) The agent according to Claim 1, wherein the oxidation potential of the second oxidant is above that of HO₂ to OH⁻.
- 3. (Previously Presented) The agent according to Claim 1, wherein the second oxidant comprises a persulfate.
- 4. (Previously Presented) The agent according to Claim 19, wherein the peroxodisulfate comprises sodium peroxodisulfate.
- 5. (Previously Presented) The agent according to Claim 1, wherein the permanganate comprises potassium permanganate.

Application No. 10/578,593 Docket No.: 085523-0181114 Preliminary Amendment dated February 2, 2011

Reply to Final Office Action dated November 2, 2010

6. (Previously Presented) The agent according to Claim 1, wherein the agent

comprises sodiumtripolyphosphate.

7. (Previously Presented) The agent according to Claim 1, wherein the agent

contains sodium hexametaphosphate.

8. (Previously Presented) The agent according to Claim 1, wherein the agent

comprises the following composition:

3-5% sodiumperoxodisulfate,

0.06-0.08% potassium permanganate,

5-7% sodium tripolyphosphate,

9-11% sodium hexametaphosphate,

- 2.0-3.0%, of the mixture of sodium carbonate and sodium hydrogen

carbonate.

9. (Previously Presented): A method for cleaning, disinfection, and monitoring

cleanliness, comprising: combining the agent of Claim 1 with water to form a first

aqueous solution;

combining an alkaline agent with the first aqueous solution to form a second

aqueous solution, wherein the alkaline agent is configured to ensure a pH of the second

aqueous solution of at least 11;

and

tracking the cleaning progress by monitoring an intensity of light passed through

the second aqueous solution.

10. (Previously Presented) The method according to Claim 9, wherein the light

comprises violet, green and/or yellow wavelength.

3

Application No. 10/578,593 Docket No.: 085523-0181114 Preliminary Amendment dated February 2, 2011

Reply to Final Office Action dated November 2, 2010

11. (Previously Presented) The method according to Claim 9, further comprising

circulating the second aqueous solution through the components to be cleaned and/or

disinfected.

12. (Canceled):

13. (Previously Presented) The method according to Claim 9, wherein the agent

comprises the following composition:

- 3-5% sodium peroxodisulfate,

0.06-0.08% potassium permanganate,

5-7% sodium tripolyphosphate,

9-11% sodium hexametaphosphate,

- 2.0-3 0%, of a mixture of sodium carbonate and sodium hydrogen

carbonate.

14. (Previously Presented) The method according to Claim 9, wherein the

monitoring the intensity of the light is ascertained automatically.

15. (Previously Presented) The method according to Claim 9, wherein the

cleanliness is calculated from the intensity change of the light passed through the

second aqueous solution and the quantity of the agent used.

16. – 17. (Canceled)

18. (Previously Presented): The method according to Claim 9, further comprising

circulating the alkaline agent through the components to be cleaned and/or disinfected

and subsequently combining the alkaline agent with the first aqueous solution.

4

Reply to Final Office Action dated November 2, 2010

19. (Previously Presented): The agent according to Claim 3, wherein the second

Docket No.: 085523-0181114

oxidant comprises a peroxodisulfate.

20. (Previously Presented) The agent according to Claim 1, wherein the agent is

in a liquid form and storage-stable.

21. (Previously Presented) The method of Claim 9, wherein the method is

configured to clean carbonators, fillers or brewery.

22. (Previously Presented) The composition of Claim 1, wherein the composition

changes color on contact with the substance external to the composition, wherein said

color change allows a visual evaluation of an amount of the substance external to the

composition oxidized by the composition.

23. (Previously Presented) The composition as Claimed in Claim 1, wherein the

color change is from purple to a second color other than purple.

24. (Previously Presented) The composition as Claimed in Claim 23, wherein the

second color is green.

25. (Previously Presented) The composition as Claimed in Claim 23, wherein the

second color is yellow.

26. (Previously Presented) The composition as Claimed in Claim 1, wherein the

composition changes color upon contact with a substance external to the composition,

wherein the substance external to the composition comprises an organic substance.

27. (Previously Presented) The composition of Claim 26, wherein the water-

soluble permanganate reacts with the organic substance.

5

Docket No.: 085523-0181114

28. (Previously Presented) The composition of Claim 26, wherein a peroxodisulfate reacts with the organic substance.

29. (Previously Presented) The composition as Claimed in Claim 1, wherein the composition changes color upon contact with a substance external to the composition, wherein the substance external to the composition comprises an organic substance, the second oxidant comprises peroxodisulfate, and both the water-soluble permanganate and the peroxodisulfate react with the organic substance.

30. (New) The composition as Claimed in Claim 1, wherein the agent comprises: a peroxodisulfate, a polyphosphate, a metaphosphate, and a carbonate.

31. (New) An agent comprising:

a first oxidant comprising a water-soluble permanganate,

a second oxidant whose oxidation potential exceeds that of a mixture containing 50 mol% manganese VII and 50 mol% manganese VI; and

a pH buffer,

wherein the agent is in a liquid form and is storage-stable.

- 32. (New) The agent of Claim 31, wherein the pH buffer comprises an alkali.
- 33. (New) The agent of Claim 32, wherein the alkali comprises a primary and/or secondary alkali carbonate.
 - 34. (New) An aqueous solution comprising an agent, the agent comprising:
 - a first oxidant comprising a water-soluble permanganate,
- a second oxidant whose oxidation potential exceeds that of a mixture containing 50 mol% manganese VII and 50 mol% manganese VI; and

a pH buffer,

wherein the agent is in a liquid form and is storage-stable.

35. (New) The aqueous solution of Claim 34, wherein the pH buffer comprises an alkali.

Docket No.: 085523-0181114

- 36. (New) The aqueous solution of Claim 35, wherein the alkali comprises a primary and/or secondary alkali carbonate.
- 37. (New) The aqueous solution of Claim 34, further comprising an alkaline agent, wherein the alkaline agent is configured to ensure a pH of the aqueous solution of at least 11.
- 38. (New) The aqueous solution of Claim 34, further comprising an alkaline agent, wherein the alkaline agent is configured to ensure a pH of the aqueous solution of at least 12.
 - 39. (New) The agent of Claim 31, further comprising a hardness stabilizer.
- 40. (New) The agent of Claim 38, wherein the hardness stabilizer comprises a polyphosphate.
- 41. (New) The aqueous solution of Claim 34, further comprising a hardness stabilizer.
- 42. (New) The aqueous solution of Claim 41, wherein the hardness stabilizer comprises a polyphosphate.

Application No. 10/578,593 Docket No.: 085523-0181114

Preliminary Amendment dated February 2, 2011 Reply to Final Office Action dated November 2, 2010

43. (New) The aqueous solution of Claim 34, wherein the aqueous solution is ready for use in cleaning a surface in a plant.

- 44. (New) The method of Claim 9, wherein the second aqueous solution is in a form ready for use in cleaning a surface in a plant.
- 45. (New) The aqueous solution of Claim 37, wherein the aqueous solution is ready for use in cleaning a surface in a plant.
